FAS - #1 COMMON

FAS

FAS derives from an earlier grade known as "First and Seconds". It is the best and most expensive grade. Boards 6" and wider, 8' and longer. Yields 83-1/3 percent of clear face cuttings with minimum sizes of 4" x 5', or 3" x 7'. Suitable for fine furniture, interior joinery, solid wood moldings, and other applications where clear, wide boards are needed.

FAS 1-Face (F1F)

One face meets FAS requirements and the poorer face meets Number 1 Common grade requirements. Usually combined with FAS lumber, thereby providing at least one FAS face.

Selects

Face side is FAS, back side is No. 1 Common. Boards are 4" and wider, 6' and longer. Yields 83-1/3 percent clear face cuttings with minimum sizes of 4" x 5', or 3" x 7'. A cost effective substitute for FAS when only one good face is required.

No. 1 Common

Often referred to as "Cabinet" grade in the USA due to its extensive use for kitchen cabinets. Boards are 3" and wider, 4' and longer. Yields 66-2/3 percent clear face cuttings with minimum sizes of 4" x 2', or 3" x 3'. Provides good value, especially if relatively small pieces can be used.

No. 2A Common

Also known as "Economy" grade. Boards are 3" and wider, 4' and longer. Yields 50 percent clear face cuttings 3" and wider by 2' and longer. Grade of choice for US hardwood flooring industry.

No. 2B Common

Same as No. 2A Common, except that stain and other sound defects are admitted in the clear cuttings. An excellent paint grade.

Sound Wormy

Same requirements as #1 Common and better but wormholes, limited sound knots and other imperfections allowed. Not commonly available.

No. 3A Common

Boards are 3" and wider, 4' and longer. Yields 33-1/3 percent clear face cuttings 3" and wider by 2' and longer. Economical choice for rough utility applications: crates, palettes, fencing, etc.

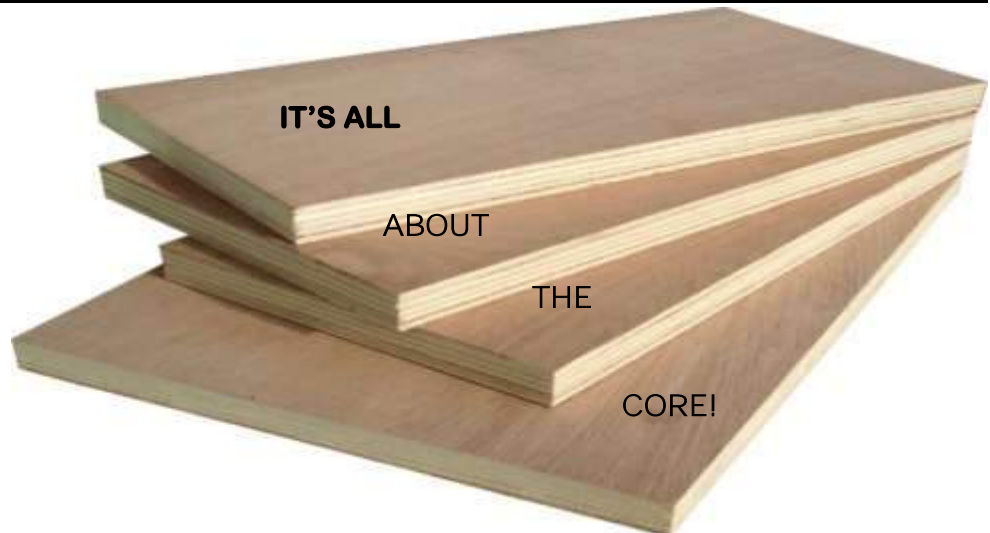

No. 3B Common

Boards are 3" and wider, 4' and longer. Yields 25 percent clear face cuttings 1-1/2" and wider by 2' and longer. Applications same as No. 3A Common.

FACTS ABOUT OUR IMPORTED

P
L
Y
W
O
O
D

Our imported **BIRCH** plywood is manufactured the way cabinet makers want their panels, with solid kiln dried #1 plies in the core. These cores are superior in quality to all other cores that are available in the market today. The plies are hand selected for their soundness and minimum core voids.

Additional care is given to the drying to avoid delaminating and warping.

ROTARY CUT (WPF)

The log is mounted centrally in the lathe and turned against a razor sharp blade, like unwinding a roll of paper. Since this cut follows the log's annular growth rings, a bold variegated grain marking is produced. Rotary cut veneer is exceptionally wide.

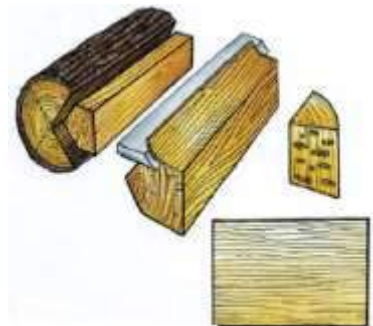

FLAT CUT OR PLAIN SLICED

The half log, or flitch, is mounted with the heart side flat against the flitch table of the slicer and the slicing is done parallel to a line through the center of the log. This produces a variegated figure.

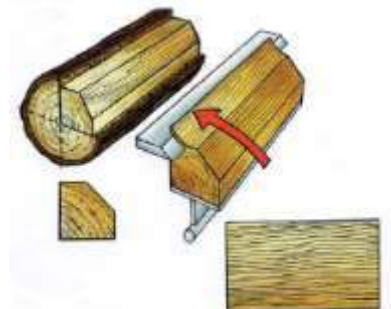

QUARTER SLICED

The quarter log or flitch is mounted on the flitch table so that the growth rings of the log strike the knife at approximately right angles, producing a series of stripes, straight in some woods, varied in others.

RIFT CUT

The veneer is produced in the various species of Oak. Oak has medullary ray cells which radiate from the center of the log like the curved spokes of a wheel. The rift or comb grain effect is obtained by cutting at an angle of about 15% off of the quartered position to avoid the flake figure of the medullary rays.
